

FILECLOUD

FileCloud for Clinical Trial & Research organizations

BESTiR

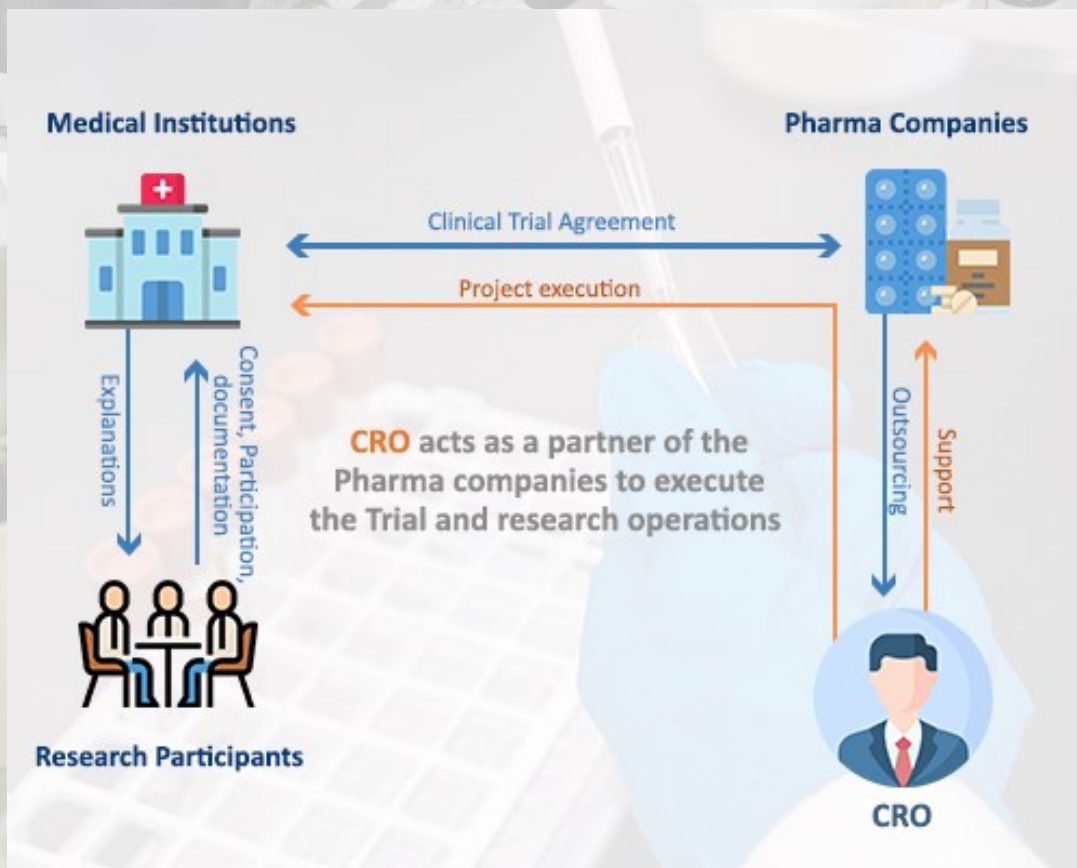

Bestir brings FileCloud to Indian companies as an official partner to CodeLathe Technologies Inc

Clinical trial and research organizations (CTOs, CROs) are an important part of the Pharma value chain to bring a well tested and validated solution to the market. You play an important role in multiple aspects of the drug/device development process, from initial discovery to launch, with focus on clinical trials.

Some of the main services include,

- Biological and chemistry expertise
- Formulation assistance
- Project management
- Database build, Data entry and validation
- Clinical trial patient recruitment, data management
- Medicine and disease coding
- Quality and metric reporting
- Study report evaluation and submission

Typically the clinical trial ecosystem involves CROs & their teams, Pharmaceutical companies, Medical institutions, Sponsors, Research participants etc.

With multiple stake holders, and the importance and sensitiveness of the data, it is imperative you handle handles data Storage and sharing in a secure manner.

Filecloud provides a proven solution to your data security problems. Our customer list below, mentions a small list of valued organizations that have endorsed us by being our customers.

FileCloud benefits for Clinical Trial and Research organizations

- Get free client logins that can be used for Sponsors, clients, consultants or others who need limited access. These users can view, download and upload files. This will help you **save on user licenses** in your Clinical Trial & Research engagements.
 - FileCloud provides **data security** to your records. While sharing healthcare records to any stakeholders e.g. institutions, government or any other entity, FileCloud protects the data from **data breaches, viruses** and **malware** using features like integrated antivirus detection and two factor authentication along with high level data security.
 - Your administrators can **limit maximum number of downloads** of a shared file, Trigger the expiry of a share after a certain time, Limit or prevent downloads.
- 
- An illustration depicting data security and file management. It shows two laptops on a desk. One laptop is open, and a small figure in a suit is standing on it, holding a folder. Another small figure is standing on the keyboard of the second laptop, also holding a folder. A yellow crane-like structure is positioned over the second laptop, with a hook and rope mechanism. The background is a light gray gradient.
- Healthcare professionals do not have time or the space to take portable PCs or even tablets with them. You rely on smart phones. FileCloud **Office365 integration** allows your users to view common file formats from web browser of their smartphones, without having to buy or install additional applications.
 - FileCloud also provides built-in **DICOM (.dcm) format preview**. Supports X-rays, CT scans, Ultrasounds and MRIs files.
 - Your FileCloud admin can easily track the files as they move between different people and different versions. FileCloud offers **HIPPA complaint audit trails**. Comprehensive audit show users, their actions (**access, modification, deletion, or other**), on which data (includes files and folders), at what time (**full timestamp**), and through which device (**web or mobile, for instance**.)
 - In Clinical industry reports are very confidential. You can easily ensure only **authorized users have access to confidential data** (and at the right level of security in each case).
 - FileCloud provides data backup to ensure protection of confidential data.
 - You can use **remote wipe** for mobile devices. Based on the data security needs, admin can delete files from a mobile device, while blocking future access as well.
 - With FileCloud get flexible options for File storage – **“On-premise”, Cloud or Hybrid**. You can have all your data stored in your own server for enhanced security.
